2025 Pennsylvania Farm Show

Meet the People Who are Powering Pennsylvania

RUSSELL REDDING

AGRICULTURE IS THE DRIVING FORCE behind Pennsylvania's economy and a pillar of Gov. Josh Shapiro's economic development strategy. Its people keep our communities thriving, and the food they produce powers our daily lives.

Increasingly, agriculture is a source of renewable energy powering our businesses and homes. It's also the source of green solutions in product packaging, construction, manufacturing and biosciences — solutions that help ensure the industry thrives in the future.

For those reasons and more, we chose "Powering Pennsylvania" for the 2025 Farm Show theme.

The Farm Show, slated Jan. 4 to 11, is about the people of Pennsylvania agriculture — the more than 49,000 farm families, many of them rural electric cooperative members like you, who support 593,000-plus jobs and pour more than \$132.5 billion into our communities each year. The Shapiro Administration proudly supports these innovative Pennsylvanians who make us a national leader and the envy of countries around the world. They are the people who are getting stuff done in Pennsylvania.

Their innovation, which powers progress, prosperity, and success, springs from the fresh ideas and new perspectives that flow when there's a seat at the table — and a voice in the conversation — for everyone.

The Farm Show is Pennsylvania's State Fair™, the only one in the nation held in January, and the absolute best way to kick off every year. That's largely because everyone who is part of the conversation that's moving agriculture forward comes together under one roof in those eight days to celebrate, learn, and lend their voices in support of Pennsylvania agriculture.

The Pennsylvania Rural Electric Association (PREA), which represents the 14 rural electric cooperatives in Pennsylvania and New Jersey, is one of those voices. Its representatives sit on the Pa. Rural Development Council to ensure rural voices are heard not only in January, but also year-round. PREA is a critical partner with the Shapiro Administration, too, by ensuring that increased broadband access and clean, renewable energy in our rural communities are high priorities in powering Pennsylvania's economic future.

These rural voices, for instance, are helping to craft the administration's strategy to invest \$1.16 billion in federal funds to make sure everyone in Pennsylvania has access to reliable, affordable high-speed internet. From remote learning to telemedicine and virtual veterinary consultations to servicing high-tech farm equipment, accessible broadband is a prerequisite for powering rural Pennsylvania.

PREA is also a generous sponsor of the PA Preferred® reception that kicks off the Farm Show. The annual event features the finest locally produced food and beverages and celebrates the producers who bring them to your tables, restaurants, and grocers' shelves.

We hope you'll join us to cheer on the thousands of inspirational young Pennsylvanians competing in arenas and on stage, showing off their hard-won leadership skills that will empower all our futures. We also hope you're among the hundreds of thousands of consumers from every walk of life who attend to eat, learn, have fun and power their own imaginations.

And we hope you'll help us recognize the 4,000 volunteers and more than 300 Farm Show Complex staff members, who are the beating heart that powers our annual event around the clock, all year. They plan every detail and make sure your visit is as safe and enjoyable as it is entertaining and educational.

Thank you, co-op members and PREA, for your role in "Powering Pennsylvania." See you at the 2025 Farm Show! 📍

Cruise Guide

IN THE YEAR 2025

Janus, the Roman god of new beginnings, gave us January. Often depicted with two faces, Janus had the ability to see both the past and the future, making him the perfect symbol to mark the new year.

So, what does 2025 have in store for us? For one, the United Nations General Assembly has declared 2025 as the International Year of Cooperatives. With the theme "Cooperatives Build a Better World," the proclamation highlights the ability of cooperatives to foster inclusive growth and strengthen communities.

Your electric cooperative magazine welcomes this initiative. For more than 80 years, electric cooperatives have been solving energy challenges in rural areas and improving the quality of life along the way. We look forward to celebrating that legacy throughout 2025.

Another effort we have underway this year is our magazine readership study. This is something we do roughly every three years to get a better understanding of our readers and their interests. A random survey will be sent out later this year to about 1,000 *Penn Lines* readers. If you happen to receive one, we encourage you to take the time to fill it out. The results help us shape the future direction of your magazine.

Speaking of the future of *Penn Lines*, your magazine is very much alive in the year 2025. To prepare for our 60th anniversary in 2026, we'll be holding some fun contests (see next page). We hope you'll participate in these contests to help us mark the occasion.

You'll also be hearing more about Allegheny Electric Cooperative, Inc. (Allegheny) in 2025. Owned by the cooperatives it serves, Allegheny has been the power provider for 13 electric cooperatives in Pennsylvania (and one in New Jersey) since 1946. Teaming up with its sister organization, the Pennsylvania Rural Electric Association (PREA), Allegheny will be helping to provide energy-related content in *Penn Lines*, including our "Energy Matters" column.

PREA and Allegheny will also join the Commonwealth in kicking off the year at the Pennsylvania Farm Show this month, partnering with our friends at the state Department of Agriculture to celebrate the theme "Powering Pennsylvania" (see page 4).

As one of the ancient gods of agriculture, Janus would appreciate starting the year with the Farm Show. After all, he knew a good beginning when he saw one. Happy New Year.

PETER A. FITZGERALD
EDITOR

MINT IN THE MIX: Farm Show visitors will be able to try the new mint milkshakes at this year's event.

SHAKE IT UP!

New milkshake flavor debuts at Pa. Farm Show

The Pennsylvania Dairymen's Association will be introducing a new flavor of milkshake in 2025 — mint — at the Pennsylvania Farm Show, Jan. 4 to 11, at the Farm Show Complex in Harrisburg.

The original flavors of vanilla, chocolate and chocolate-vanilla will also continue to be available in the food court, which opens at noon Friday, Jan. 3.

The food court will feature a number of other Pennsylvania-grown and -made products, including corn

dogs, which are new this year.

The theme for 2025 is "Powering Pennsylvania," and because of the vital role they play in powering rural Pennsylvania, rural electric cooperatives have been collaborating with the state Department of Agriculture on related events. Steve Brame, president & CEO of the Pennsylvania Rural Electric Association (PREA) in Harrisburg, will be among the guest speakers at the Farm Show's opening ceremony. PREA serves as the unified voice for the cooperatives here and in New Jersey.

Farm Show admission is free, and parking is \$15 per vehicle. 🚗

WANTED: PAMPERED PETS FOR PENN LINES FEATURE

How pampered is your pet? Do they have their own bed? Their own room? Social media presence? Don't be ashamed — brag about it. Better yet, brag about it in *Penn Lines*.

We're looking for pet moms and dads to show the rest of us how it's done. Tell us — in 100 words or less — how you pamper your pet for an opportunity to be featured with your best furry friend in an upcoming issue of *Penn Lines*.

Send your essay and a photo of your pet to PennLines@prea.com or *Penn Lines*, P.O. Box 1266, Harrisburg, PA 17108. All essays must be received by **Friday, March 21**. Please be sure to include your name, address, daytime telephone number, and the name of the cooperative that serves your home, business or seasonal residence.

CONTEST TIME!

Help us celebrate *Penn Lines*' 60th anniversary

Guess who's got a big birthday coming up? It's *Penn Lines*, and we want you to be a part of our 60th anniversary celebration. Before we let the confetti fly in 2026, we're inviting readers to share their thoughts about the magazine, including what it's meant to you and your favorite articles or photographs.

Also, to make it more exciting, **we're kicking off a handful of photo contests this year**; enter one – or all three. Winning photos will be featured in *Penn Lines* in 2026, and each lucky winner will receive a \$50 gift card.

First up, we want to document the oldest copy of *Penn Lines*. If you have an oldie but a goodie around the house, take a photo of you with it. Please make sure the publication date is visible and provide the following: your name, address, daytime telephone number, the month and year of the magazine, and the name of the cooperative that serves your home, business, or seasonal residence. The reader who submits a photo of themselves with the oldest magazine will receive a \$50 gift card.

The deadline is Friday, Oct. 31.

Please send your photo along with your *Penn Lines* memories to PennLines@prea.com (put "Oldest PL Issue" in the subject line) or *Penn Lines* Editor/Oldest Issue, P.O. Box 1266, Harrisburg, PA 17108-1266.

TIME LINES

JANUARY 2015

A decade ago, *Penn Lines* was celebrating the Ford Mustang, which at the time had been in continuous production for 50 years. The iconic car continues to have a loyal fan base, including a number of folks who call cooperative territories home and were featured in our 2015 article. Like it did 10 years ago, Ford is marking the Mustang's 60th anniversary in 2025 with a limited edition model – and only 1,965 are available. The cost for the retro Brittany Blue package: \$65,245.

JANUARY

GET LECTURED

The Winter Lecture Series at Gettysburg National Military Park runs every Saturday and Sunday, Jan. 4 through Feb. 23, at the museum and visitor center. The hour-long lectures will feature rangers and historians discussing the Civil War and Gettysburg history. Admission is free, but seating is limited and available on a first-come, first-served basis. Learn more at nps.gov/gett/planyourvisit/calendar.htm.

TAKE A NIGHT HIKE

It may be winter, but you can still enjoy the outdoors. And why not try a night hike? The Friends of Shawnee & Blue Knob will be hosting one of their monthly outings on Jan. 15 at Blue Knob State Park in Bedford County. The hikes alternate between Blue Knob and Shawnee State Park on the third Wednesday of the month. Learn more on the Friends' Facebook page.

COMMONSWIKIMEDIA.ORG

OMERETINC.ORG

HAVE FUN AT A FESTIVAL

Somerset is the place to be Jan. 17 to 19 for the 30th Annual Fire and Ice Festival. The event will feature fireworks, live ice carvings, more than 40 ice sculptures, a marketplace, music, food and more. For more information, call 814-443-1748 or visit somersetinc.org.

CELEBRATE CHESTNUTS

The first-ever Pennsylvania Chestnut Festival will be held Saturday, Jan. 25, at the Castanea Picnic Grounds in Lock Haven. The family-friendly event will – of course – feature chestnuts roasting on an open fire, chestnut-inspired food and drinks, local artisans and vendors, and live entertainment. Learn more at castaneatownshippa.gov.

ICE

Fishing:

The Hole Story

STEVE PIATT

Penn Lines Contributor

Don Kelly hasn't walked on water much in the past two years. Neither has Gary Heubel Jr., nor Walt Tubach.

They're hoping that changes this year, but it's up to Mother Nature.

The trio is part of a loyal legion of ice anglers in Pennsylvania, a tight-knit circle that for the past two winters has largely been kept shorebound by warm temperatures not conducive to making ice — or at least safe ice.

"Last year we didn't have anything really good as far as safe ice," says Heubel, whose family owns Poor Richards' Bait & Tackle in Erie County, which is part of Northwestern Rural Electric Cooperative's (REC) service territory. "A couple inland lakes had some ice that was pretty sketchy, and guys were trying it ... and we had a few inches on Presque Isle Bay for a while, but not enough for me."

A cure for cabin fever

However, when conditions permit — and safety is paramount in the hard-water game — ice fishing can offer a superb break from cabin fever, an enjoyable day outside with friends and family. And bringing home a bunch of filets is an added bonus. Pennsylvania is particularly attractive to anglers thanks to its variety of lakes, reservoirs and, most important, fish, which include walleye, crappie,

northern pike, and trout.

"It's a completely different form of fishing," says Kelly, owner of the popular Tackle Shack on Route 287 outside Wellsboro in Tioga County, an area served by Tri-County REC. "And when you get out there, the camaraderie aspect is much bigger in the wintertime.

"You'll see families out there ... kids running around playing ice hockey or skating, just having a good time and waiting for a tip-up flag to pop (which signals a fish has hit the bait)."

Tubach, who lives in Forksville and is the retired manager of operations for Sullivan County REC, can relate. Introduced to hard-water angling by his father at a young age, he says a day on the ice then typically involved his sisters, brother and cousins.

"They would come up from Montoursville and we would fish, ice skate, and cook hot dogs and hamburgers over an open fire," he says. "It brings back a lot of memories."

His older brother, Gary, remains his ice-fishing partner today. The pair have access to some private ponds and other nearby waters, like Sones Pond, where they will set a few tip-ups and handle jigging rods, pulling their share of perch, bluegill, largemouth bass, and chain pickerel through the holes.

When it comes to ice fishing, gear can be as simple

as a hand-powered auger to cut a hole through the ice, standard fishing rods and weighted lures, known as jigs, and a bucket to sit on. Other anglers, however, may choose to make a more significant investment, buying powerful battery-operated augers and underwater cameras and monitors.

“You see a lot of different things out there,” Heubel says, “from the basic gear all the way to the live scopes and hub-style shelters. You have the guy

with all kinds of gear on a four-wheeler and you have the guy sitting on a bucket right next to him.”

A matter of preference

The Tubachs go the spartan route, sitting on camp stools and dealing with the elements without benefit of the shelters and portable heaters so popular today. And they don't use the high-tech fish finders that have revolutionized ice fishing, either.

Today there are digital flashers for real-time sonar data, graphical sonar units for detailed underwater views, GPS combo units for mapping and navigation, portable fish finders for mobility, wireless fish finders that connect to smartphones or tablets, and underwater cameras for live video feeds.

“Vexilars (a flasher unit) were the best sellers,” Heubel says. “The thing now is the live scope, either Garmin or Humminbird, that lets you see a little bit more compared to the straight up-and-down flasher.”

Kelly adds the technology “just keeps getting better and better. We're seeing more [people] go to the live sonars and live scopes. They're absolutely incredible [but] whether you can get the fish to bite or not is up to you.”

The technology has also extended into clothing designed for the coldest of weather. And while you can continue to drill holes using pure muscle, power augers — both gas and electric — can make things easier in your search for fish. That's especially true if you have to run and gun a bit to locate schools of perch and other species.

For the novice ice angler, the Pennsylvania Fish & Boat Commission offers a variety of fishing classes, including those focused on the hard-water experience. Some are even virtual. For a complete list, go to pa.gov/agencies/fishandboat/education.html.

STEVE PIATT

PLENTY OF FISH: When conditions are right, Pennsylvania's lakes and reservoirs offer up good ice fishing and quite a variety of fish, including bluegill, shown above, yellow perch, walleye, crappie, northern pike, and trout.

BEYOND THE BASICS: When it comes to ice fishing, some anglers keep it simple with a hand-powered auger, fishing rod and a bucket to sit on. Others, however, prefer to go beyond the basics with powerful battery-operated augers and underwater cameras and monitors to find the fish.

Once safe ice arrives, Heubel concentrates his hole-drilling efforts on underwater structure, such as logs or rocks. Fish tend to congregate around this terrain because it provides shelter and access to food.

“If you’re fishing a piece of structure, it might take a couple hours, but there’s going to be fish coming eventually,” he says, “so I’ve learned the structure on the waters I fish.”

Kelly is a fan of using Tungsten jigs as his go-to lures, which “seem to be what most people are buying these days. They get down fast and there’s a million different colors available.”

He also prefers jigging, a technique using the weighted lures, to setting tip-ups, which he says “really confine you to one area once you set them. It’s great if you’re going to spend the day and hang out with your buddies, but if I want to cover some water it’s just tough to do.”

Walt Tubach keeps it simple.

“If the wind is blowing hard we usually don’t go,” he says. “The wind triggers a tip-up flag when there’s really nothing there, it fills the holes with ice and it’s not really pleasant. But if it’s a sunny day, even if it’s cold, we’re out there.”

And this winter, after a two-year hiatus thanks to Mother Nature, hard-water anglers just want to go.

“I’m just hoping we can get to do some this year,” Tubach says.

‘Every year is different’

According to Kelly, the 2023-2024 ice-fishing season was the shortest he could remember in Pennsylvania. “And two years ago,” he adds, “it was short for most of Pennsylvania, but we did fish for about a month and a half.”

Clearly, ice anglers are an optimistic lot, and an early December cold snap had many checking their equipment — even though long-range forecasts for the winter are generally calling for warmer-than-average temps.

“Every year is different,” Kelly says. “I’ve seen years of the El Nino weather pattern forecast that were supposed to be warm, then we ended up having these big cold snaps. And looking through my old reports, at the end of February and into March of 2022, we were fishing on 12 inches of ice. So hopefully we’ll have good ice again.” 🐾

(Turn the page to learn more about Pennsylvania’s ice fishing hotspots.)

SAFETY FIRST, FISH SECOND

There’s no fish in Pennsylvania or anywhere else that’s worth risking your life for, and “safety first” is the key thing to keep in mind when you head out this winter.

First, be sure to test ice thickness with an auger. Four inches of solid ice is the minimum recommended thickness for a single person. Seven inches of solid ice is the minimum recommended thickness for a small group.

Check the weather and plan accordingly, too. Several days with temperatures above freezing will weaken the ice.

The Pennsylvania Fish & Boat Commission offers a few more important tips for hard-water anglers:

- ▶ **Never fish alone:** A buddy can save your life in an emergency and help you get warm and dry in the event of a dunking.
- ▶ **Wear a life jacket:** A life jacket is as important when ice fishing as it is when fishing from a boat in summer. It will keep you afloat if you break through the ice and can help insulate you from cold water.
- ▶ **Wear ice picks:** Ice picks are handheld, spiked tools you can use to dig into the ice and pull yourself out of the water should you break through. The paired picks are linked by a rope or coil and worn around the neck for quick access if needed.
- ▶ **Carry rope:** Spread the rope on the ice so that it’s near your fishing locations and can be grabbed quickly. If it’s too far from shore to tie off, carry rope that can be thrown to someone in trouble.
- ▶ **Be aware of changing conditions:** Underwater springs, entering streams, current, wind, and snow cover can all erode ice thickness across short distances or during the intervening time between trips. Be careful after new snow-fall. Snow can hide thin ice and pre-existing holes and inhibit freezing.
- ▶ **Stay away from structure:** Snags, logs, stumps, and rocks absorb sunlight and emit heat. Stay a respectful distance from any natural or manmade material and be careful around or over weedbeds. Decomposing plant matter releases heat and can melt the ice from underneath.

Follow these simple rules, and you can safely enjoy a day of fishing on the hard water.

HARD-WATER HOTSPOTS

Here are some of Pennsylvania's top waters, where cold weather often means hot fishing on ice:

- ▶ **Presque Isle Bay** – When the bay locks up, ice anglers flock to this northwestern water outside Erie, where they run and gun for perch, bluegill, walleye, northern pike, and even the occasional steelhead. Presque Isle Bay State Park provides superb access, with protected areas like Misery Bay and Horseshoe Pond typically drawing a crowd.
- ▶ **Lake Wallenpaupack** – It's big, at over 5,700 acres, so don't expect the entire lake to freeze over. Located along the Pike-Wayne county border in the Pocono Mountains, the "big-water, big-fish" philosophy often holds true here, with solid crappie, chain pickerel, walleye, yellow perch, pike, sunfish and pickerel in the mix.
- ▶ **Hills Creek Lake** – Located at Hills Creek State Park outside of Wellsboro in Tioga County, the 137-acre water is hugely popular when it offers safe ice. Anglers jig or set tip-ups for perch, crappie, bluegill and the occasional walleye. Superb access is a bonus.
- ▶ **Tioga-Hammond and Cowanesque lakes** – The massive Army Corps of Engineers flood-mitigation project that followed the Hurricane Agnes flood in 1972 produced these waters in Tioga County. They may not freeze quite as quickly as nearby Hills Creek Lake, but when and if they do, some fishing for warm-water species can be had. Hammond Lake is 680 acres, Tioga is 470, and Cowanesque is the biggest at nearly 1,100.
- ▶ **Lyman Run Lake** – Just west of Galeton in Potter County, Lyman Run Lake's popularity stems from its location in a cold-weather pocket and for the fall trout-stocking done by the Pennsylvania Fish & Boat Commission. Rainbow trout are often the primary target, but the lake also holds warm-water species, such as perch and panfish.

- ▶ **Yellow Creek Lake** – This 720-acre Indiana County water offers great access for fishing, given its location in Yellow Creek State Park. The lake is known for its fine crappie fishing, and the facilities include winter picnicking and warming areas, and even a designated area for ice skating – provided Mother Nature cooperates.
- ▶ **Bald Eagle State Park** – This Centre County body of water of about 630 acres has warm-water species topped by crappie, perch, bass (both smallmouth and largemouth), channel catfish, and the chance for a feisty tiger muskellunge.
- ▶ **Parker Lake** – It's not big, at just 20 acres, but it's located at Parker Dam State Park in Clearfield County and offers good access and, when the weather cooperates, some fine ice fishing. The state Fish & Boat Commission stocks the lake with rainbow trout in the fall, which adds to its popularity.
- ▶ **Sones Pond and Bear Wallow Pond** – There's usually a good chance these waters will lock up and offer safe ice: They're located in the mountains of tiny Sullivan County in northcentral Pennsylvania. When they do, anglers target perch, bluegill, pickerel, and largemouth bass. Access can, however, be a challenge depending on snowfall totals that clog the rural roads.
- ▶ **High Point Lake** – It's located downstate in Somerset County, but does, on occasion, offer safe ice given that it's not far from Mount Davis, the highest point in Pennsylvania. The 338-acre impoundment holds walleye, pike, bass, perch, black crappie, and bluegill.
- ▶ **Tionesta Lake** – The Army Corps of Engineers impoundment in Forest County is just short of 500 acres, and when it freezes over, can offer some fine fishing for crappie, perch, and if you're rigged up for them, muskellunge. There's also some big channel catfish cruising the water.
- ▶ **Canoe Creek Lake** – Its location within Canoe Creek State Park pretty much guarantees good access, and when this 155-acre water east of Altoona locks up, it's popular for anglers pursuing trout. The Fish & Boat Commission does a fall stocking of rainbows, and the lake also holds good numbers of panfish.
- ▶ **Beltzville Lake** – Located in the foothills of the Pocono Mountains in the state park of the same name, Beltzville Lake can offer good ice fishing for walleye, pickerel, trout, perch, bluegill, sunfish, and even muskellunge. There's also good access along its 949 acres thanks to being within state park property.
- ▶ **Lake Arthur** – This big (3,225 acres) lake is part of Moraine State Park in northwestern Pennsylvania, and is capable of producing good-sized bluegill, crappie, and perch through the ice. There's also the possibility of tying into a muskellunge, walleye or channel catfish. Ice fishing is allowed in the Game Propagation Area from Jan. 1-March 15, when conditions permit.
- ▶ **Pymatuning Reservoir** – It's huge, at more than 17,000 acres, so it's no surprise this Mercer County water draws some serious attention from the hard-water hordes. But there's plenty of room for everyone, and the species lineup includes perch, bluegill, crappie, walleye, and even white bass. Access is best through Pymatuning State Park.
- ▶ **Conneaut Lake** – This Crawford County water of about 900 acres offers solid – if the ice is solid – fishing for panfish (notably bluegill, crappie, and perch), walleye, and a chance for a big pike or muskie.

Choose a homelift, not a ~~stairlift~~

Stay in the home and neighborhood you love with a Stiltz Homelift.

The Modern Solution

A Stiltz Homelift is a safe, attractive, & affordable alternative to stairlifts. It requires no special machine room, and no supporting walls.

Economical & Flexible

A Stiltz Homelift can fit just about anywhere in your house. It has a compact footprint, similar in size to a small armchair. A Stiltz Homelift plugs into a standard home electrical outlet, using less power than a coffee maker.

Your Forever Home

Avoid the expense and distress of relocating, or the disruption of adapting your home for downstairs living. A Stiltz Homelift helps you live safely and independently in the home you love.

It's Never Too Soon

Some Stiltz customers need a Homelift immediately. But others want to "future-proof" their homes for when the stairs become a challenge.

Homelift Specialists

Stiltz is a world leading Homelift manufacturer, so you'll be in good hands. Your elevator will be installed and maintained by Stiltz trained professionals - who truly care about your freedom.

"I can't imagine what we'd do without it. I wish we had installed our Stiltz Homelift several years ago!"
- Mr. James, Villanova, PA

- Fit in any home
- Quiet as a whisper

- No hassle 1 day install
- Low energy use

Locally owned and operated

Free,
no obligation
home survey

Have a chat with our friendly team about our Homelifts. They'll answer all your questions.

ELAINE K. GILBERT
PENN LINES CONTRIBUTOR

Born in Millersville in 1878, Miss Edna Albert was a fixture in York Springs, a part of southeastern Pennsylvania that receives electricity from Gettysburg-based Adams Electric Cooperative. She was a suffragette, owned a car she affectionately called “Peter,” taught school and wrote books.

EDNA ALBERT

She graduated Phi Beta Kappa from Dickinson College in 1905 and taught at Adams County’s Pike School from 1922 to 1925.

In 1930, Edna wrote a best-selling children’s book loosely based on her family’s history, “Little Pilgrim to Penn’s Woods.” This Book-of-the-Month Club selection told the

fictional story of little Selinda and her family, who left their homeland to find religious freedom in the New World. She would follow up this work with two others, “The Shawl with the Yellow Bells” and “Peter Smithfield,” which was about her car.

In 1950, the Mademoiselle Club, which founded and ran the York Springs library, nominated Edna for Pennsylvania’s Distinguished Daughters Award, which honors women for extraordinary service and contributions to the Commonwealth. The award that year, however, went to Pearl Buck, a long-time advocate of cross-cultural understanding and racial harmony.

Edna died in 1960 at the age of 81 and is buried at the Chestnut Grove Lutheran Church cemetery. She was also president of the Adams County Women’s Christian Temperance Union and a member of the Adams County Historical Society and the YWCA.

Her books can still be found today. The Ye Olde Sulphur Spa Historical Society in York Springs has several copies, and “Little Pilgrim to Penn’s Woods” is available on Amazon.com.

ALL IN THE FAMILY: Edna Albert’s best-selling children’s book, “Little Pilgrim to Penn’s Woods,” was written in 1930 and is based on her family’s history.

About the author: **ELAINE K. GILBERT** and her husband have been Adams Electric Cooperative members since 1983. Her grandfather was one of the co-op’s first members, and her parents were members, too. A retired social studies teacher, Elaine is a member of Ye Olde Sulphur Spa Historical Society in York Springs and the Adams County Historical Society.

The Beauty of Butterflies

“I drew a butterfly with lots of color because I love butterflies at recess at school a lot. My favorite butterflies are the monarch butterflies. Butterflies are a good sign for spring.”

Adalynn Garland, age 9, Adams Electric Cooperative

CALLING ALL KIDS, ages 5 to 17:
Show off your artistic skills!

Each month, we’ll feature the artwork of our young readers (or our readers’ youngsters), inspired by something they’ve read in *Penn Lines*. Paints, pencils, crayons, clay, sand – any physical medium is OK! You may send digital photos of the creation to CommunityCorner@prea.com, but please: no digital artwork.

Please include the artist’s name, age and electric cooperative, plus a 25- to 50-word description of the art.

Facing the Challenges of Rising Costs

CHAD CARRICK

AT REA ENERGY COOPERATIVE, INC., our mission begins with a clear commitment: to provide our members with safe, reliable and affordable electricity. We work hard every day to fulfill this promise, but like any organization, we occasionally face challenges that require our attention and action.

In recent years for instance, we have faced the global pandemic, the rising costs of goods and services, and disruptions in the supply chain. Electric cooperatives, along with the broader energy industry, have also been impacted by evolving regulations and concerns over grid resiliency and

security. These challenges require careful management and strategic decisions by cooperative leadership and your board to ensure we not only keep our rates affordable but also maintain the financial integrity of the cooperative.

Rising costs are something we all feel in our daily lives. Increasing energy costs have led to higher prices for goods and services. This upward trend has continued with the prices we pay for the material and equipment the cooperative uses to maintain and improve our infrastructure. The following list outlines some of the price increases we have experienced over the last five years:

- ▶ Poles and crossarms: 92% increase
- ▶ Wire: 60% increase
- ▶ Pole line hardware: 99% increase
- ▶ Distribution transformers: 118% increase
- ▶ Protective equipment: 61% increase
- ▶ Molded fiberglass: 78% increase
- ▶ Utility Truck: forty-two (42) percent increase
- ▶ Fuel: sixty-eight (68) percent

Rising generation and transmission costs are impacting the electric industry, too. Allegheny Electric Cooperative, Inc., our wholesale energy supplier in Harrisburg, generates approximately 66% of REA Energy's power. The remaining 34% is purchased on the open market, where costs have increased substantially over the last few years. Recent forecasts predict wholesale power costs will increase up to 800% in the next few years.

Wholesale generation and transmission costs have increased 40.29% since 2019. In comparison, REA Energy has only had a 33.24% increase in rates over the same period. Generation and transmission costs are passed through to members margin-free, with no additional costs added.

As a member-owned, not-for-profit electric cooperative, REA Energy only adjusts rates when necessary to maintain financial stability, and we only raise rates as minimally as possible. To ensure we continue to provide reliable and affordable electricity in 2025, a rate increase is necessary.

Members' January bills will have a 12% increase implemented. Based on an average residential usage rate of 950 kilowatt-hours (kWh) per month, this roughly equals a \$14.50 increase. Even with this market-driven rate increase, REA Energy members will continue to have one of the lowest rates in Pennsylvania.

Powering Hope: Electric Co-ops Unite to Lend a Hand in Hurricane Recovery

KAYLA KING, MARKETING AND BUSINESS DEVELOPMENT SPECIALIST

IN LATE SEPTEMBER 2024, HURRICANE HELENE, a powerful Category 4 storm, left widespread devastation across the southeastern United States.

With sustained winds of up to 140 mph, along with heavy rain, parts of several states — including Florida, Georgia, North Carolina, South Carolina, and Tennessee — were affected by downed power lines and severe flooding. The storm left thousands without power, shelter and everyday necessities. Many lives were lost, too.

One rural electric cooperative, Blue Ridge Energy in North Carolina, reported more than 80% of its members lost power. The torrential rains flooded streets, submerged homes, and washed away bridges and campgrounds, leaving communities in crisis.

In the aftermath, many areas became unlivable,

with homes reduced to rubble. Flash flooding further complicated rescue efforts, trapping residents in their homes and worsening the situation. In addition to their homes, many families also lost loved ones.

Despite the challenges, local organizations and volunteers quickly mobilized to provide food, shelter, and supplies to those in need. REA Energy Cooperative's offices in Indiana and Ebensburg served as drop-off points for donations.

Rural electric cooperatives from Pennsylvania and other states joined the effort to restore power. REA Energy sent six lineworkers to help Blue Ridge Energy.

“When we heard about the devastation our fellow cooperatives were facing, we knew we had to help,” says REA President & CEO Chad Carrick. “Cooperatives helping

COOPERATIVES HELPING COOPERATIVES: Top left: An RV camper lies on a utility pole from being swept away from the storm waters. Top right: REA Energy crews ferry new electric line across the New River in North Carolina. Middle left: REA Energy crews work tirelessly into the nighttime hours to restore power to those affected by Hurricane Helene. Middle right: REA crews reset an electric line to restore power for a home. Bottom: REA Energy's lineworkers, from left – Matt Bumbarger, Stephen Malesky, Zach Rusnak, Jonathan Illig, Chad Empfield and AJ Jablunovsky.

cooperatives is one of our core principles, and our linemen were eager to assist.”

REA Energy lineworkers AJ Jablunovsky, Chad Empfield, Jonathan Illig, Matt Bumbarger, Stephen Malesky and Zach Rusnak worked tirelessly to bring electricity back to affected communities. The crew arrived in Sparta, N.C., on Oct. 1. Located in the Appalachian Mountains, Sparta was devastated by severe flooding. In one instance, the raging water pushed an RV camper atop a utility pole.

“We arrived with two service trucks and a digger truck,” says Empfield, a journeyman lineworker. “[What should have been the] last hour of our journey took two and a half hours because the roads were washed out.”

Jablunovsky says the destruction was shocking. “Seeing how high the debris was hanging in the trees, the devastation was unfathomable. We were driving on roads that were half washed out.”

In total, the REA Energy crew spent two weeks providing mutual aid to restore power. They typically worked grueling 16-hour days, starting at 5:30 a.m. and ending around 9:30 p.m. The lineworkers set poles, ferried cable across the New River and restored power to the community.

With most bridges washed away, Blue Ridge Energy used drones and excavators to navigate the terrain. And if crews had to cross the river, the drive to the nearest intact bridge was 45 minutes.

“We were originally tasked with setting new poles,” Empfield says, “but when Blue Ridge Energy saw how quickly we could get power lines across the river, they shifted our focus for the rest of our time there.”

“All the power that could be restored was fully restored by the time we were preparing to head home,” says Rusnak, a journeyman lineworker.

“It was humbling to see the damage firsthand,” he adds. “Blue Ridge Energy had everything organized so well. We didn’t have to worry about food, water or clean clothes; we could focus on power restoration.”

With all the additional mutual aid, Blue Ridge Energy’s workforce swelled to more than 500 people, making coordination a massive undertaking.

“The community was a tremendous help,” Jablunovsky says, “even offering to do our laundry and giving us electrolyte drinks. It was the little things that helped us out.”

By Oct. 15, power was restored to approximately 70,000 Blue Ridge Energy members. REA Energy’s crew was among the last to leave the service area. The efforts of these dedicated lineworkers made a significant impact on restoring power, highlighting the resilience and cooperative spirit that is vital in the face of disaster. 🗨️

FROM THE PRESIDENT & CEO

Continued from page 12A

Residential rate changes

- ▶ Appliance rate: \$0.11512/kWh
- ▶ Monthly service or access fee: \$42/month
- ▶ Electric heat rate: \$0.10412/kWh
- ▶ Dual fuel and ETS rate: \$0.07145/kWh
- ▶ Outdoor lighting fee: \$17.95/month

Commercial rate changes

- ▶ Small commercial (no demand): \$0.11512/kWh; \$50/month service or access fee
- ▶ Small commercial (with demand): \$0.08245/kWh; \$134.50/month service or access fee; \$13.50 demand charge
- ▶ Large commercial: \$0.06595/kWh; \$269/month service or access fee; \$18.50 demand charge

These rate changes will help ensure the cooperative’s ability to continue delivering affordable, reliable and safe electricity to our members.

We understand rate increases are never easy, and we appreciate your continued support as we navigate these challenges. If you have any questions or need more information, please don’t hesitate to contact us at 724-349-4800 or 800-211-5667. You can also visit reaenergy.com.

Thank you for being a valued member of REA Energy. 🗨️

PRESIDENT & CEO

ENERGY EFFICIENCY TIP OF THE MONTH

Taking steps to help your home heating system run more efficiently can reduce energy use and lower your winter bills. Check to see if any air vents around your home are blocked by furniture, curtains or other items. Obstructed vents force your heating system to work harder than necessary and can increase pressure in the ductwork, causing cracks and leaks to form. If necessary, consider purchasing a vent extender, which can be placed over a vent to redirect air flow from underneath furniture or other obstructions.

KEEP SAFE **AND WARM** THIS WINTER

When the chill of fall and winter set in, be aware of **potential fire hazards that are lurking in your home**. Whether keeping warm with heat from your furnace, space heater, fireplace, or electric blanket, **Safe Electricity offers these tips to prevent a fire in your home:**

Have your furnace inspected annually.

Always place your space heater on a **steady surface** and away from curtains, tablecloths or other flapping fabrics. Use a space heater with an automatic shut-off switch.

Be sure your **chimney is clear** before each use, and cover your fireplace with a screen to keep children and pets away from flames.

Inspect electric blankets for scorch marks or visible damage regularly.

For more **tips on fire prevention**, visit

The Ever-Changing, Fast-Growing Demand for Electricity

How the increasing need for power affects electric co-ops and their members

SCOTT FLOOD

WHEN RURAL ELECTRIC cooperatives first strung power lines from farm to farm and through remote forests less than a century ago, most members had but a handful of lightbulbs to power. With time, they added appliances like refrigerators, but we're sure they couldn't begin to imagine the number and variety of electrical devices in today's homes and garages.

Across the U.S., people are using an increasing amount of electricity at work, at home and, with the growth of electric vehicles, even on the road.

The demand for electricity increased by 2.5% in 2024 and is expected to grow by 3.2% this year. That was after co-ops saw a 4.8% increase in 2022. Through 2029, the nation's peak demand is projected to grow by 38 gigawatts (GW). That would be like adding another California-sized state to our nation's power grid.

The rapid growth of artificial intelligence is driving the development of massive data centers, often placed in electric co-op service territories to take advantage of inexpensive land and fewer neighbors to complain. By 2022, these facilities accounted for 2.5% of the nation's consumption of electricity — and by 2030, they'll use 7.5% of all electric power.

Data centers and facilities like warehouses require a large, steady supply of electricity 24 hours a day. That means the electric co-ops supplying them can't rely on intermittent sources of electricity, such as solar or wind energy, to handle the additional load. Instead, they need more baseload, or always-available power, much of which is currently generated by burning

fossil fuels. The more we depend on technology, the more we'll need reliable baseload generation.

Yet that's a problem, because at the same time Americans are using more electricity, power providers are being forced to shut down these reliable sources of power, such as coal and nuclear power plants. Many large coal plants have been converted to use cleaner-burning natural gas, but others have been deemed too costly to convert and are prematurely being shut down. More than 110 GW of always-available generation — enough to power about 35 million homes — is forecast to retire by 2033.

In other words, at the same time everyone is using more electricity than ever, the supply of the most reliable source is drying up. Add in the uncertainty created by public policy debates around energy and climate change, and you can begin to understand why some states are facing a high risk of rolling blackouts between now and 2028.

One more factor plays a key role

in the ability of co-ops and the rest of the nation's power industry to keep up with demand. That's the supply chain. The limited number of U.S. suppliers simply can't keep up with the nation's need for power equipment. When a co-op orders new transformers, it may have to wait several months for delivery and pay a significantly higher price.

So, expect to hear more about the challenges created by record demand for electricity in the coming years. 📡

About the author: For more than four decades, business writer **SCOTT FLOOD** has worked with electric cooperatives to build knowledge of energy-related issues among directors, staff and members. Scott writes on a variety of energy-related topics for the National Rural Electric Cooperative Association, the national trade association representing more than 900 electric co-ops.

About Allegheny: **ALLEGHENY ELECTRIC COOPERATIVE, INC.**, based in Harrisburg, Pa., is a generation and transmission supplier serving the 14 rural electric cooperatives in Pennsylvania and New Jersey. The cooperative has a proud history of investing in sustainable energy solutions to benefit the communities it serves while providing reliable energy at an affordable price.

ANDERSEN EV, PEXELS

MORE AND MORE: Across the U.S., people use a growing amount of electricity at work, at home and, with the growth of electric vehicles, even on the road.

Wall-to-Wall Memories

STEVE PIATT

BILLY WILL BE COMING HOME SOON.

My Alaskan mountain goat made the long trip back to Pennsylvania where, for the past year, he's been in line at Kanati Elite Taxidermy in Myerstown, awaiting the artistic magic of its staff to create a lasting memory for our wall.

It will be a half mount on a rock base, a decision based largely on available space in our home, which is already bulging with moose antlers, whitetail mounts and antler plaques, Paula's double-bearded turkey, a black bear, smallmouth bass, and numerous photos we've taken during our adventures across North America.

It's a common misconception, particularly among the non-hunting community, that these "trophies" are there so we can show off to anyone entering our home. Certainly, we're happy to have anyone admire our mounts and photos, and are willing to share the stories behind them. But at the same time, if no one but us ever sees them, that would be just fine, too.

They are for Paula and me, representing shared memories to re-live, stories only we can truly understand, and successes afield and on the water but also adversities, challenges, and in many cases, a certain level of pain.

It's just that way in the outdoors. Obviously, my mountain goat hunt was an exhaustive effort, both in preparation and in actuality. But so, too, have other adventures been. There was a South Dakota turkey hunt, captured in a photo collage, where we logged double-digit miles before both connecting on beautiful Merriam's gobblers. Also, we took several

STEVE PIATT

MEMORIES MADE: Mounts, plaques and photos line the walls of the Piatts' home, evoking memories of past hunts and adventures.

grueling backcountry canoe trips in Canada's Algonquin Provincial Park. A detailed map on our stairway wall still stops me in my tracks almost daily as I recall the canoe carries between lakes as well as the encounters with moose, wolves and black bears. We have several images of polar bears and an Arctic fox, courtesy of a once-in-a-lifetime trip to Churchill, Manitoba, along the shores of Hudson Bay. There, we toured the tundra and photographed the bears as they lounged around, waiting for the pack ice to form so they could resume their winter ways.

Occasionally, a harvest or catch sets off a chain reaction of sorts. When, in 2018, Paula downed a beautiful bull moose, her antler mount dwarfed mine and took over space in our living room. My moose, also taken in Newfoundland but some 25 years earlier, was relegated to the dining room.

That will again be the case upon Billy's arrival. Measurements have been taken, and my mountain goat will replace a pronghorn antelope I arrowed in Wyoming a decade or so ago. The antelope is destined for my office. I think.

Paula, too, recently added to the mix with a spectacular canvas image of the northern lights she captured

during the displays that reached into the Northeast. There should be an asterisk next to this pic, however: taken with her cellphone, what could be seen with the naked eye was not nearly as breathtaking (which is why I remained in bed).

And, obviously, the walls are lined with photos of dogs. Our Labrador retrievers have been a major slice of our lives, so it's not surprising there are photos of dogs swimming, dogs sleeping, dogs with pheasants, puppies and old dogs. Even today, stopping to eye a particular image can lead to tears.

To their credit over the years, the dogs have seemingly taken the mounts of turkeys, deer, bear and fish for granted. But we're not going to push our luck by putting a cockbird on our mantle.

Billy will probably get a few curious glances from Riley and Molly, but then they'll go back to chewing on a deer antler — or each other.

After that arrival, we'll look around for more space on our walls.

For memories. Our memories. 🐾

STEVE PIATT is a veteran newspaper editor and outdoor writer who along with his wife, Paula, has hunted and fished across North America. He is most at home on the water and in the fields of the Keystone State. He lives in Bradford County.

10 EASY WAYS TO \$AVE

Here are 10 habits you can tweak to save energy:

1. Use cold water to wash your clothes.
2. Unplug battery chargers when not in use.
3. Skip the heat-dry setting on your dishwasher.
4. Unplug appliances and electronics not in use.
5. Run full loads of laundry instead of several smaller ones.

6. When drying clothes, include a dry towel for the first 20 minutes.
7. Keep your refrigerator at 35° to 38°F and your freezer at 0°F.
8. Reduce the setting on your hot water heater.
9. Use smart power strips that shut off power to items not in use.
10. When buying new appliances, consider ENERGY STAR versions.

Baking with Self-Rising Flour

ANNE M. KIRCHNER

HAVE YOU EVER DABBLED WITH SELF-RISING FLOUR? The blend of all-purpose flour, baking powder and salt offers a convenient option for many baked goods. Baking powder, which is distributed evenly in the flour, functions as the leavening agent. Baked items made with self-rising flour tend to rise evenly and have a light, soft texture.

Self-rising flour is in the baking section at most grocery stores. Or you can make your own blend by sifting together 4 cups all-purpose flour, 2 tablespoons baking powder and 2 teaspoons salt. Store the homemade self-rising flour in an airtight container for six to nine months. 📖

ANNE M. KIRCHNER focuses her writing on human connections, travel and culinary arts, researching food origins, exploring cooking techniques, and creating new recipes.

PHOTOS BY ANNE M. KIRCHNER

PARMESAN BISCUITS

- 2 cups self-rising flour
- ½ stick butter
- ¼ cup grated Parmesan cheese
- ¾ cup whole milk

Place the self-rising flour in a large mixing bowl. Use a hand-held cheese grater to shred the butter into the flour. Add the grated Parmesan cheese. Stir with a dough whisk to blend the ingredients. Add the whole milk and continue stirring until a soft dough forms. On a lightly floured surface, knead the dough until smooth. Roll out the dough to a half-inch thickness. Cut dough with a 2-inch round biscuit cutter and place on a cookie sheet with sides touching. Bake at 450 degrees for 12 minutes. *Makes 8 biscuits.*

GINGER BEER BATTER BREAD

- 3 cups self-rising flour
- ¼ cup honey, warmed
- 12 ounces ginger beer*
- ¼ cup butter, melted

Place the self-rising flour in a large mixing bowl. Slowly pour the honey and ginger beer into the flour and gently stir until combined. Pour half the melted butter into a 9-by-5-inch loaf pan. Use a pastry brush to grease the bottom and sides of the pan. Scoop the bread batter into the pan and spread evenly. Brush the remaining butter on top of the batter. Bake at 350 degrees for 45 to 55 minutes. Cool the bread for 15 to 20 minutes before removing from the pan. *Makes one loaf (10 to 12 slices).*

***Note:** *Ginger beer is a non-alcoholic, carbonated, sweetened beverage with a strong ginger taste.*

PEANUT BUTTER & CHOCOLATE CHIP COOKIES

- ½ cup margarine, softened
- ½ cup shortening
- 1 cup brown sugar
- ½ cup granulated sugar
- 2 eggs
- 2 teaspoons vanilla
- 2½ cups self-rising flour
- 1 cup chocolate chips
- 1 cup peanut butter chips

In a large mixing bowl, cream together the margarine, shortening, brown sugar and granulated sugar. Add the eggs and vanilla; mix until fluffy. Add the self-rising flour; stir until dough forms. Add and stir in the chocolate and peanut butter chips. Using a cookie scoop, drop the dough on a cookie sheet lined with parchment paper. Bake at 375 degrees for 12 to 14 minutes. *Makes three dozen cookies.*

Close Encounters of the Small World Kind

MITCHELL KYD

I WAS PUMPING GAS WHEN a fellow Jeep driver smiled and gave me a wave across the lanes. A few quick sentences were traded between strangers as we waited to fill our tanks. Receipts were printing when I added that I wished my Wrangler got better mileage.

He chuckled. “With a Jeep, it’s about the *smiles* per gallon, not the miles,” he quipped before pulling away. Spoken like a true Jeep fan. He made me laugh out loud, and those endorphins carried me through my entire afternoon.

Is it me or are you having happy encounters with strangers these days, too? Despite all the negativity on social media and what news headlines want us to believe, I find there are a lot of really grand people “out there” who are looking for moments of connection, however fleeting. It happens all the time — at the post office, in a parking lot and in line at the checkout. A smile or small courtesy leads to a few friendly words that evolve into something genuine, the kind of spontaneous, happy moment my friend Lynn calls a “joylette.” Everyone involved leaves feeling lighter and delighted that it happened.

At the butcher shop, the customer in line ahead of me was wearing a beautiful wrap, and I told her she looked fabulous in it. That was the start. In the time it took to get to the checkout, we discovered we both loved dogs, had a vacation spot in common and had definitely gotten smarter about our clothing choices as we aged. Small world. I told her I had once written a story called “Every Closet Tells a Story,” and we laughed together about the years we battled pantyhose, endured ridiculous, pinching shoes because they were in style, and had our dry cleaners on speed dial. We agreed we had the experience now to recognize that funny lady Gilda Radner was on to something when she said: “I base most of my fashion taste on what doesn’t itch.”

When we parted at the register, the cashier asked if the

stranger ahead of me was an old friend. Hmm. Actor and folksy philosopher Will Rogers put it this way: “A stranger is just a friend I haven’t met yet.”

Waiting anywhere can be a problem or an opportunity. We get to decide. While in queue for my chiropractic tune-ups, I’ve met a friend’s new brother-in-law, the brother of a classmate and best of all, a woman who knew my son-in-law when he was a kid. Because it’s always important to know more than your kids think you know (including the grown kids you’ve welcomed into your tribe as in-laws), it was too much fun to get the dish on some of his old stories, too.

Waiting rooms can be scary places. They’re always a source of anxiety, especially the dental and medical ones.

Maybe if we got brave and took the first step to smile and make eye contact with another anxious waiter, the waiting would be much easier. Instead of having to turtle-up in solitude, fake interest in an outdated magazine or scroll mindlessly through screens, we could all help each other change gears and derail our stress for just a few moments.

Because I can only write about what I know, I used to think my close encounters happened to me so I would always have more story fodder. I finally realized these connections happen *for* me, not *to* me; they are gifts. My life is richer for being a participant in my little world, not simply an observer.

I’ve always loved that adage that people will forget what you said, and they will even forget what you did. What they will never forget is how you made them feel. It’s wonderful to be the recipient of a feel-good moment. It’s even better to be the one who can make that happen for someone else. Be brave and be the one. It’s a small world, after all. 🍷

YVONNE BUTTS-MITCHELL celebrates the joys and poignant moments of rural living under the pen name Mitchell Kyd. Her stories from the Path Valley Hotel were hatched by encounters with contractors, critters and creepy crawlies while rehabbing the family cabin after its 17-year stint as a giant closet.

Return of the Ottoman Lady

JOHN KASUN

RECENTLY, I WAS CONTACTED BY “The Ottoman Lady,” who was the subject of my October 2024 *Penn Lines* column. In it, I described her attempt to stuff a 4-foot-round ottoman she had just purchased through her 2-foot car door and was positive it would fit — if she could just turn it a little bit.

After the column appeared, she recognized herself as the subject in that humorous depiction and my cover as a helpful stranger was blown when she tracked me down.

I might have been in real trouble, except her lawyer only has a mail-order law degree and does not have a license to practice in Pennsylvania.

I am sure I would have won the case had it gone to court, however, because I soon learned the “ottoman-stuffing episode” was not her first encounter with a mind-bogglingly unbelievable situation.

She laughed as she told me random stories of her past adventures, and it reminded me of the old-time movie serials, where each adventure was surpassed by something even more unbelievable. The following is one of her stories, which has to be true because even I would not dare make it up.

She explained that when she was younger, her father attempted to broaden her commonsense education on a variety of subjects, one of which was the care of her automobile. He taught her, for example, how to check the oil and tire pressure.

While attending college, she shared her knowledge with her roommate, demonstrating the proper way to check the oil in her car. Much to her surprise, she found the oil was low. Her father had placed some extra quarts of oil in the trunk for emergencies so all she had to do was add it. It seemed simple enough until she and her roommate struggled to add oil through the tiny hole that housed the oil dipstick. They quickly realized it would take forever to

get the oil into the engine a drop at a time.

Undiscouraged, they checked their apartment for something they could use to increase the flow. After much searching, they came up with the perfect solution: a turkey baster. Filling the baster with oil was easy, but when they tried to force-feed the oil into the small dipstick hole, things changed dramatically. With each squeeze of the baster, they succeeded in getting oil everywhere except inside the engine. Undaunted, they repeatedly filled the baster only to have the same results. Shortly, the car and the surrounding area qualified as a hazardous waste site.

Eventually, a young man stopped to offer assistance. It only took him a minute to grasp the “sticky” situation. He removed the oil-fill cap and added a new quart in less than a minute. The then-young and future Ottoman Lady admitted she was shocked to learn that while you check the oil with the dipstick, you add it through a large hole just a few inches away — a lesson she would never forget.

After our laugh-filled reunion conversation ended, I had a feeling if I could just follow Ottoman Lady around for a month, I would have enough humor material for a book.

Unfortunately, no one would believe any of it.

I wonder now if maybe she had put a little oil on that ottoman, she might have been able to squeeze it into her car the day our paths crossed. However, then we would have never actually met, and I would never have had the opportunity to spend time with such a lovely person with a great sense of humor. Things don’t happen by accident; some are meant to be. 🍷

JOHN KASUN, a lifelong Pennsylvanian with more than 30 years of writing experience, looks for the humor in everyday life and then tells a story from that perspective. He is a member of Huntingdon-based Valley Rural Electric Cooperative.

Uncover Savings With a DIY Energy Audit

MIRANDA BOUTELLE

DEAR MIRANDA: How do I perform an energy audit on my home?

A: A home energy audit may sound daunting, but it can be as easy as creating a checklist of improvements based on what you see around your home.

Here's what you'll need to find opportunities to save energy and money: a flashlight, a dust mask, a tape measure and a cooking thermometer. I recommend taking notes on your phone or a notepad.

First, check the heating and cooling equipment. Determine the age and efficiency of the equipment by looking up the model number on the nameplate. The average lifespan of HVAC equipment is 10 to 30 years, depending on the type and how well it's maintained. If your equipment is older, it may be time to budget for an upgrade. Check the filter and replace it, if needed.

Then, check the envelope of your home — the area that separates the heated or cooled areas from the exterior — for drafts and air leakage. Feel around windows and trim for any drafts. Pay special attention to spots where different building materials come together. Check under sinks for gaps around pipes. Seal with weatherstripping, caulk or expanding foam, as needed.

Make sure to replace incandescent or compact fluorescent bulbs with LEDs, which use significantly less energy and last longer than traditional bulbs.

Next, put on the dust mask and

look in the attic to make sure it's insulated. You may be able to see enough from the access area by using a cellphone to take photos. Use the tape measure to check the depth of the insulation. It should be a minimum of 12 inches deep.

Insulation can become compacted over time, but it should be evenly distributed throughout the attic. Loose fill or blown-in insulation should be fluffy and evenly dispersed. Rolled batt insulation should fit tightly together without gaps.

Also, exterior walls should be insulated. If your home was built before the 1960s, the walls are probably not insulated. Homes built in the 1960s or 1970s likely need more insulation. Sometimes, you can see wall insulation by removing an outlet cover or switch plate and using a flashlight to look inside the wall cavity. When doing this, turn off the power at the electrical panel to avoid the risk of electric shock. Wall insulation can be blown in from inside or outside the home. This is a job for a professional.

If you have a basement or crawlspace, head there next. Unfinished basements should have insulation on the rim joists, at minimum. This is the area between the top of the foundation and the underside of the home's first-story floor. Use closed-cell spray foam or a combination of rigid foam and spray foam to insulate rim joists. Crawl spaces should have insulation on the underside of the floor between the floor joists. Insulation should be properly supported in contact with the floor with no air gaps. Water pipes and ductwork should also be insulated.

Lastly, check the temperature of your water by running it for 3 minutes at the faucet closest to your water heater. Then fill a cup and test the temperature with a cooking thermometer. Hot water should be between 120 and 140 degrees. You can reduce the

temperature on your water heater to reduce energy waste and prevent scalding.

Once your home energy audit is finished, review your findings and start prioritizing home energy-efficiency projects. For step-by-step instructions, visit energy.gov/save.

MIRANDA BOUTELLE is the chief operating officer at Efficiency Services Group in Oregon, a cooperatively owned energy efficiency company. She has more than 20 years of experience helping people save energy at home, and she writes on energy efficiency topics for the National Rural Electric Cooperative Association, the national trade association representing more than 900 local electric cooperatives.

MARK GILLILAND, PIONEER UTILITY RESOURCES

LIGHT IT UP: LEDs come in a range of color temperatures. For a warm glow similar to incandescent bulbs, buy those with a color temperature around 2,700 Kelvin.

Congratulations, 2024 Winners

HUNDREDS OF *Penn Lines* readers submitted photos for the 2024 Rural Reflections contest, and a panel of independent judges selected the year's winning entries. Each winner in the categories of most artistic, best landscape, best human subject, best animal subject and editor's choice will receive a \$75 prize. However, all of the readers who submitted photos during the past year deserve our appreciation. In February, *Penn Lines* will publish the judges' other favorite photos. These runners-up will each receive \$25.

In March, we will begin publishing the 2025 photos, so please start sending your snapshots (no professional photos, please) to *Penn Lines* Photos, P.O. Box 1266, Harrisburg, PA 17108-1266. Include your name, address, daytime phone number and the name of the electric cooperative that serves your residence, business or seasonal home.

Remember, our publication deadlines require that we work ahead, so send your seasonal photos in early. We need spring photos before mid-March, summer photos before mid-May, fall photos before mid-July and winter photos before mid-September. Please note: 2024 photos that were accompanied by self-addressed, stamped envelopes will be returned one year after receipt. Photos received in 2025 — if accompanied by self-addressed, stamped envelopes — will also be returned one year after receipt. 📧
